

## Hisign personal information collection

Hisign personal information collection workstation is designed as an integral one stop personal information collection solution to users. With compact integrated modular, including industrial control host PC, centralized power management module and retractable integrated console. Multiple biometrics such as fingerprint, palm print, identity cards, portrait, height and weight, the length of foot, footprint, voiceprint, DNA, mobile phone information, personal belongings pictures, etc. can be collected with this workstation. The collected data will be sent to the backend central systems for comparison to identify the person quickly and accurately.

This highly integrated acquisition system not only serves the traditional criminal investigation, forensics and public security departments, but can also extends to citizen ID and population management, anti-drug, public security, etc.
